

# Elysium Healthcare enhances patient centricity by printing less to do more

With over twenty locations across the UK, Elysium Healthcare believe in a patient centric approach to the delivery of care and all aspects of hospital life. The business and new private healthcare brand launched at the end of November 2016.

Karlson conducted a free consultation and print audit in October 2016, knowing that document security would be a particularly vital consideration.

Justin De Vally, Director of IT, at Elysium Healthcare comments,

**“Having worked with Karlson before, I knew the transformational value a vendor agnostic print strategy could unlock within Elysium’s paper related processes.”**

## £ save more

Once selected as the print and document management partner of choice, Karlson designed and managed a bespoke solution to:

- Upgrade Elysium's entire print fleet (integrating any newer machines purchased in 2015)
- Reduce the number of machines across all sites from 272, down to 162 (which will increase as new hospital sites become part of the group's estate)
- Reduce paper, toner and power waste

As a vendor agnostic solutions supplier, Karlson helped Elysium's IT team objectively realise that Kyocera technology remained the best option for the refreshed fleet; then recommended machines to complement each hospital team's differing needs.

## 🔒 secure more

Starting in March 2017, the approved solution was up and running in all sites within four months. Elysium have access to the personal data of hundreds and thousands of people, including current patients. So, it was an organisational must for Karlson to create a solution that would safeguard confidential information. Introducing secure, follow me print functionality established document and data security on the print network.

Vasco Hill, project manager at Karlson UK comments,

**"Healthcare organisations are the gatekeepers of a lot of the most sensitive and personal user (aka patient) data out there. A lot of organisations don't realise how vulnerable this data can be through networked printers and photocopiers."**

Justin De Vally adds,

**"With GDPR regulations looming, it's reassuring to know that we have already taken a significant step to secure this element of our internal data processes. With Karlson's help, we're one step closer to data process compliance, and living up to our patient-centric mantra in unseen but critical ways."**

## 📄 share more

Steve Todd, Director at Karlson adds,

**"It's been brilliant to be able to take everything we have learned over the years of working with other large private healthcare providers and apply what is now a robust standard operating model for print and document processes to Elysium. In addition to better document security, the cost containment enabled by our continuous improvement approach is great for fast growing businesses like Elysium."**
